**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1,2, 6 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Tanno (U. S. Patent no. 4,546,959).

See figures 1 and 2, housing 2, piston assembly 4, rod 5, secondary housing 13 with piston 14, compressible fluid (gas) 15, flow control member 16 with bore/orifices 17,18,19,20, entry port 9, exit port 11, rotatable member 25, one way valve 16,24,23

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tanno.

Regarding claim 6, Tanno is relied upon as above. Tanno does not disclose a detent mechanism. The examiner takes official notice that detent mechanisms are well known on control devices in order to maintain a selected position. It would have been obvious

Art Unit: 3683

to one of ordinary skill in the art at the time the invention was made to use a detent mechanism in the system of Tanno in order to ensure that the orifice and the port were properly aligned.

Regarding claim 5, Tanno is relied upon as above. Tanno does not disclose 7 orifices.

The number of orifices is a design choice. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have any number of orifices to provide different damping levels.

5. Claims 3, 7-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
